

Bobcat T250, T300 & T320

Compact Track Loader

Rubber Track Options

RT_1 Premium Style

This tread provides aggressive traction and floatation for maximum pushing power and is ideal for almost any application.

RT_3 C-Shaped

The c-shaped pattern provides more of an aggressive bite than the staggered pad. It has optimal floatation and traction with better results on hills or slopes.

RT_4 Staggered Block Pad

The staggered block pad design creates a highly versatile track with good balance and traction. The design also minimizes vibration by putting more rubber on the travelling surface which spreads the weight load while increasing floatation.

RT_8 Straight Bar

The most aggressive tread pattern for these machines is the straight bar. This track has great results in mud and snow. It is used in application where traction is much more important than the ground left behind.

RT_55 "H" Pattern

The block pad design creates a very versatile track with good balance and traction. It minimizes vibration by putting more rubber on the travelling surface, which spreads the weight load while increasing floatation.
