RT_12 & RT_23 “K Style”

Both of these staggered zigzag patterns provide good traction with less vibration and low noise. Best use in areas where the surface demands a more aggressive track.

Check with your sales representative for more options.

TIP! With good maintenance and smart operating techniques, you can get more hours out of your machine! Prior to fitting your new track, check your drive system components such as the sprockets, rollers, and idlers. These may need replacing. Wear and damage of undercarriage components can affect track performance and durability. The most important controllable factor is track adjustment. Improper adjustment accelerates wear which can increase downtime and repair costs.
